

go TO zero

We strive to minimise the environmental impact of all our products and mobility solutions throughout their entire life cycle, in order to protect ecosystems and make a positive impact on society.

Our actions are rooted in compliance with environmental regulations, standards and targets.

FOUR MAIN ACTION AREAS

Climate change

We are committed to acting in accordance with the Paris climate agreements. We want to become a **carbon-neutral company by 2050**.

By 2025, we expect to **reduce CO₂ emissions** from VGI's operations by **30%** compared to 2019.

Resources

We intend to optimise resource efficiency and promote the circular economy by maximising the use of renewable energy sources and environmentally sustainable materials.

By 2025, we expect to **reduce the energy requirements** of VGI's head office by **20%** compared to 2019 and to achieve **NZEB certification** (Nearly Zero Energy Building).

Air quality

We promote e-mobility as a way to improve local air quality. Our goal is to offer eco-friendly solutions, working in cooperation with suppliers, business partners, authorities and institutions.

By 2025, we expect **more than 20%** of our total car sales on the Italian market to be **electric or plug-in hybrid vehicles**.

Environmental compliance

In terms of **integrity**, we aim to become a **model** of a modern, transparent and successful company, by setting up and monitoring management systems that consider the environmental impact of all our activities.

We will achieve **environmental management system certification by 2025**.

“Volkswagen Group Italia is committed to pursuing a sustainability strategy aimed at minimising environmental impact, in full compliance with the rules, through continuous process improvement and efficient use of resources in every area of its activities.”
